We are pleased to announce the release of JBGMusic. Let your Joomla site be heard! This is an simple way to add background sound/music to your Joomla site. To install module, just download, setup your audio files, setup the module, publish and voila! you have sound. To add to content use the plugin version or install both, combine and enjoy!

Module Feature list.

- Place background music/audio to your Joomla website.
- Allows you to loop background music/sound
- Put a list of audio files the module can choose from, so have different music everytime!
- Very unobtrusive, you wouldn't even know it's there.
- For more control, you can publish the media controls
- Make copies (see faq) to have different audio lists for different pages.
- Audio may be resumed on page changes.

Plugin Feature list

- Ability to embed music in your content.

- Add the controllers, to have an alternative to reading, now your site is sight-challenged ready.
- Ability to autostart audio or give the controls to user.
- Have multiple copies in one document content.
-

Update:

[Web Hosting Search](#) recently awarded [J bgmusic](#) "Best Web Tool 2012".
